

DI cont E
12 which relates to the transmitted caller information is identified and displayed.

Sub E
D2
1 3. (Amended) A telephone apparatus comprising:
2 an information detector for detecting transmitted caller
3 information,
4 an operation unit for registration of caller group information which
5 relates to the transmitted caller information,
6 a memory for storing the transmitted caller information and related
7 caller group information,
8 a display unit,
9 a light source for emitting a plurality of color lights for illuminating
10 said display unit, and
11 a controller for controlling said light source,
12 wherein said light source emits a first color light when the caller
13 information detected by said information detector coincides with the caller
14 information stored in said memory and said controller causes the identification
15 and display of said caller group information, and said light source emits a second
16 color light when the caller information detected by said information detector does
17 not coincide with caller information stored in said memory.

Please add the following new claims 12 and 13:

Sub E
D3
1 12. ^{NEW} (Amended) A telephone apparatus according to claim 1, wherein
2 said information detector detects said transmitted caller information from a
3 telephone line.

1 13. ^{NEW} (Amended) A telephone apparatus according to claim 3, wherein
2 said information detector detects said transmitted caller information from a
3 telephone line.
